

“CDN Mobile” App Now Available!

GUELPH – September 14, 2015. Canadian Dairy Network (CDN) launched its new **CDN Mobile** application to compliment the vast amount of data and tools already available on its web site (www.cdn.ca). **CDN Mobile** features two specific tools, namely “Bull Search” and “Bull Lists” and the user can customize their own preferences in terms of language, breed and three primary traits of interest including either LPI or Pro\$.

“We are pleased to offer **CDN Mobile** as a quick and easy tool for accessing Canadian genetic and genomic information for all bulls whether they are genomic young bulls, proven sires in Canada or sires with a MACE evaluation”, states CDN General Manager, Brian Van Doormaal. This application can be freely downloaded from the CDN web site to any Apple or Android device and an icon can be created and added to the home screen of the device. Access to this icon means you are one click away from tools designed to quickly search for any bull of interest or scroll through lists of bulls based on your preferences.

Look for the **CDN Mobile** link on the CDN web site to learn more and get started!

Canadian Dairy Network is the national genetic evaluation centre for dairy cattle and provides services to Canadian dairy producers and member organizations including breed associations, DHI agencies, A.I. organizations and Dairy Farmers of Canada.
